Hints

Control Flows - Exercise 3 - Satisfy my conditions

- Use `array_of_numbers.len()` to get the length of the array.
- Use `*my_array.at(i)` to get an array item at location `i`.
- Remember that `continue` tells the program to go to the next iteration and to skip the rest of the code.
- To check if a number is even you can use modulo with 0 (`number % 0`)
